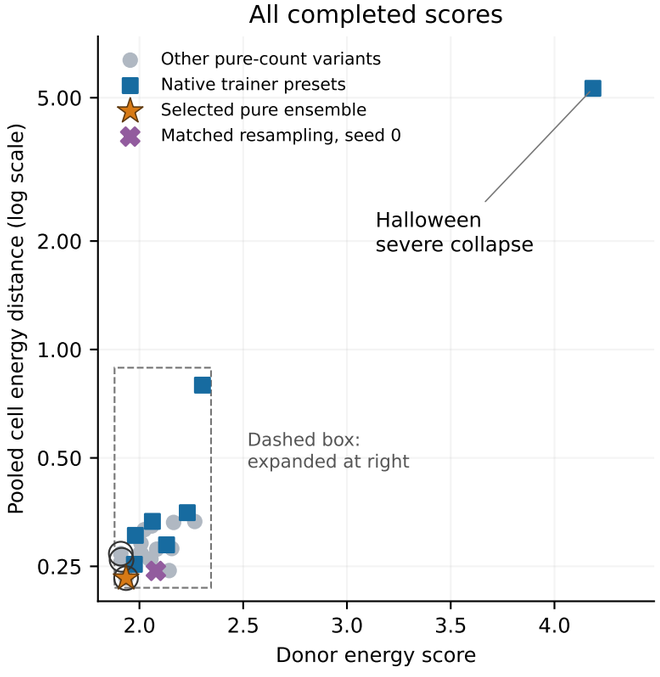
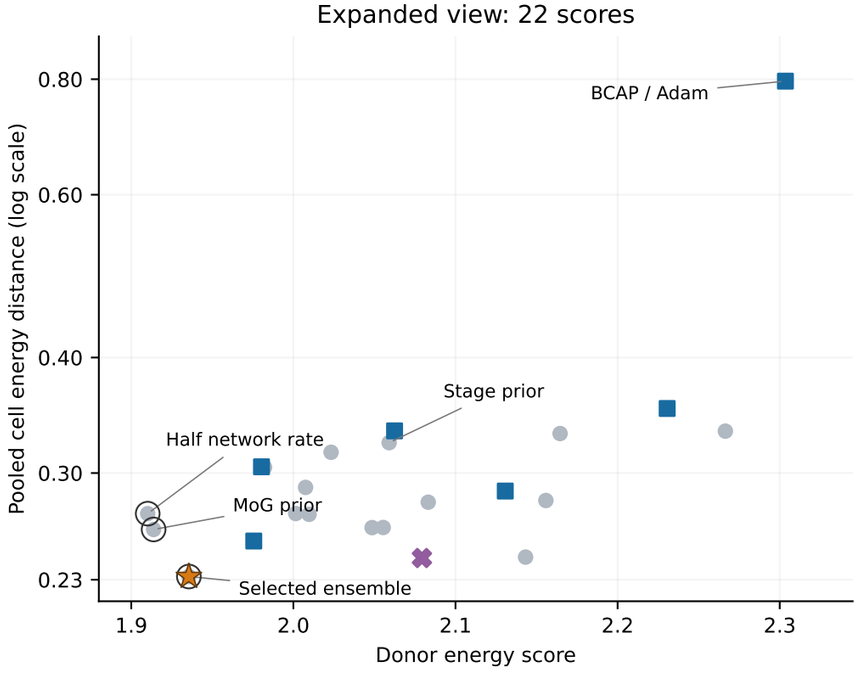
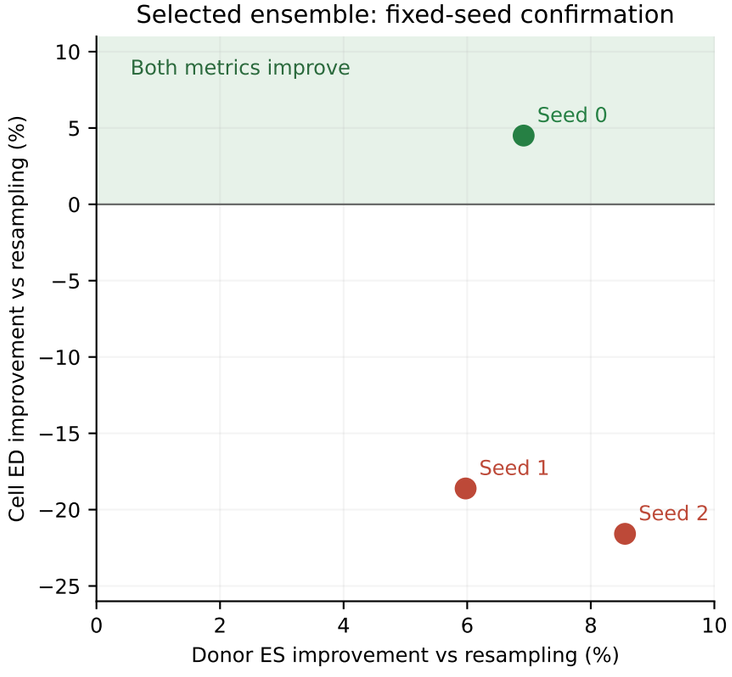
No stable joint win in donor energy and cell distribution match

23 completed seed-0 pure-count comparisons, including seven native trainer presets. Lower is better for both metrics.







Three-seed mean donor ES improves 7.16%, but seeds 1 and 2 worsen cell match. Joint confirmation: FAILED.

Same four adaptive calibration donors; seeds are training repeats. The 20 evaluation donors remain excluded.

Routed E22 has no completed score in this readout. Pareto rings describe saved seed-0 scores; they do not replace the fixed selection rule.
